

ABSTRACT

An independent base of a tablet computer comprising an enclosure and a USB hub. The USB hub comprises a driver port and a plurality numbers of peripheral ports, wherein the driver port is disposed on the enclosure and the peripheral ports
5 are connected to various driver interfaces of the base through cables for connecting with different peripheral devices within the enclosure. Such arrangement enables a computer to be connected to the base via the driver port and utilize the peripheral devices within the enclosure via the corresponding peripheral ports.
